Definitions

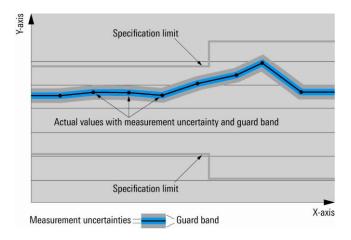

General

Product data applies under the following conditions:

- Three hours storage at ambient temperature followed by 60 minutes warm-up operation
- Specified environmental conditions met
- Recommended calibration interval adhered to
- All internal automatic adjustments performed, if applicable
- Unless stated otherwise, specifications apply to test ports and a nominal source power of -10 dBm

Specifications with limits

Represent warranted product performance by means of a range of values for the specified parameter. These specifications are marked with limiting symbols such as $\langle, \leq, \rangle, \geq, \pm$, or descriptions such as maximum, limit of, minimum. Compliance is ensured by testing or is derived from the design. Test limits are narrowed by guard bands to take into account measurement uncertainties, drift and aging, if applicable.

Specifications without limits

Represent warranted product performance for the specified parameter. These specifications are not specially marked and represent values with no or negligible deviations from the given value (e.g. dimensions or resolution of a setting parameter). Compliance is ensured by design.

Typical data (typ.)

Characterizes product performance by means of representative information for the given parameter. When marked with <, > or as a range, it represents the performance met by approximately 80 % of the instruments at production time. Otherwise, it represents the mean value.

Nominal values (nom.)

Characterize product performance by means of a representative value for the given parameter (e.g. nominal impedance). In contrast to typical data, a statistical evaluation does not take place and the parameter is not tested during production.

Measured values (meas.)

Characterize expected product performance by means of measurement results gained from individual samples.

Uncertainties

Represent limits of measurement uncertainty for a given measurand. Uncertainty is defined with a coverage factor of 2 and has been calculated in line with the rules of the Guide to the Expression of Uncertainty in Measurement (GUM), taking into account environmental conditions, aging, wear and tear.

Device settings and GUI parameters are indicated as follows: "parameter: value".

Typical data as well as nominal and measured values are not warranted by Rohde & Schwarz.

| | | Specification | Typical |
|---|-------------------|---------------|---------|
| Dynamic range ² of the R&S [®] ZNBT8 at all | 9 kHz to 100 kHz | ≥ 100 dB | 122 dB |
| ports (without optional step attenuators) | 100 kHz to 50 MHz | ≥ 120 dB | 138 dB |
| | 50 MHz to 4 GHz | ≥ 130 dB | 140 dB |
| | 4 GHz to 7 GHz | ≥ 125 dB | 138 dB |
| | 7 GHz to 8.5 GHz | ≥ 120 dB | 130 dB |

¹ The maximum number of sweep points may vary depending on the number of ports involved in the measurement.

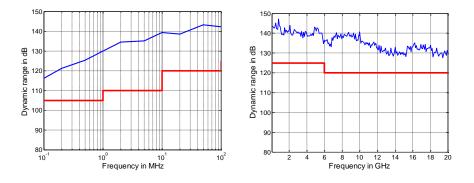

² Dynamic range is defined as the difference between the actual maximum source power and the RMS value of the data trace of the transmission magnitude, which is produced by noise and crosstalk with the test ports short-circuited. The specification applies at 10 Hz measurement bandwidth, without system error correction. The dynamic range can be increased by using a measurement bandwidth of 1 Hz. Crosstalk does not limit the dynamic range.

| Dynamic range ³ of the R&S [®] ZNBT20 at | 100 kHz to 1 MHz | ≥ 105 dB | 120 dB |

| | 10 GHz to 26.5 GHz | ≥ 110 dB | 120 dB |
| Dynamic range ³ of the R&S [®] ZNBT40 at | 100 kHz to 1 MHz | ≥ 105 dB | 120 dB |
| all ports | 1 MHz to 10 MHz | ≥ 110 dB | 130 dB |
| | 10 MHz to 5 GHz | ≥ 120 dB | 135 dB |
| | 5 GHz to 10 GHz | ≥ 115 dB | 125 dB |
| | 10 GHz to 30 GHz | ≥ 110 dB | 120 dB |
| | 30 GHz to 35 GHz | ≥ 105 dB | 115 dB |
| | 35 GHz to 38 GHz | ≥ 100 dB | 105 dB |
| | 38 GHz to 40 GHz | ≥ 95 dB | 100 dB |

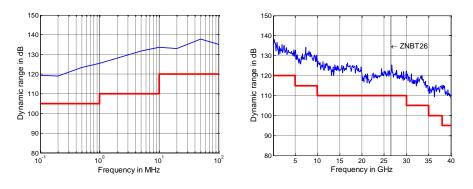

Dynamic range in dB versus frequency for the R&S[®]ZNBT8.

Dynamic range in dB versus frequency for the R&S[®]ZNBT20.

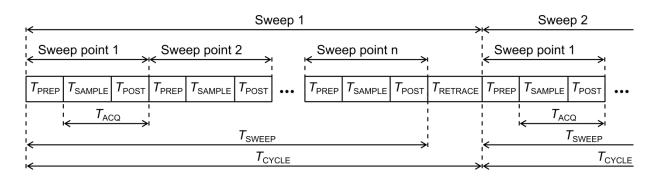

Dynamic range in dB versus frequency for the R&S[®]ZNBT26/40.

³ Below 100 MHz, dynamic range is typical between adjacent ports on the same horizontal level, e.g. between ports 1 and 2 or 5 and 6. Between 1.5 MHz and 2.5 MHz, dynamic range may be smaller than the specified value

Measurement speed

 T_{PREP} Preparation time required to set up the internal hardware components

T_{SAMPLE} Sampling time (approximately equal to the settling time of the digital filters)

T_{POST} Time required for hardware postprocessing

 T_{ACQ} Aquisition time ($T_{SAMPLE} + T_{POST}$)

 T_{SWEEP} Time required for one sweep

 T_{RETRACE} Time between two sweeps

 T_{CYCLE} Sweep cycle time ($T_{\text{SWEEP}} + T_{\text{RETRACE}}$)

Measurement data acquisition process.

⁴ In continuous mode, no additional time for data transfer is needed, as this occurs simultaneously during the measurement.

This data are valid between +18 °C and +28 °C, provided the temperature has not varied by more than 1 K since calibration. The data are valid if a R&S[®]ZV-Z270 calibration kit is used. This calibration kit is used to achieve the effective system data specified below. Frequency points, measurement bandwidth and sweep time have to be identical for measurement and calibration (no interpolation).

¹⁰ The dynamic range is defined as the difference between the actual maximum source power and the RMS value of the data trace of the transmission magnitude, which is produced by noise and crosstalk with the test ports short-circuited. The specification applies at 10 Hz measurement bandwidth, without system error correction. The dynamic range can be increased by using a measurement bandwidth of 1 Hz. Crosstalk does not limit the dynamic range. Dynamic range for test port pairs where the receiving port is fitted with option R&S[®]ZNBT8-B5xx. If the source port is fitted with option R&S[®]ZNBT8-B5xx and the receiving port is not, the values reduce by up to 10 dB.

¹¹ The noise level is defined as the RMS value of the specified noise floor.

Extended warranty with a term of one and two years (WE1 and WE2) Repairs carried out during the contract term are free of charge ¹⁸. Necessary calibration and adjustments carried out during repairs are also covered.

Extended warranty with calibration coverage (CW1 and CW2)

Enhance your extended warranty by adding calibration coverage at a package price. This package ensures that your Rohde & Schwarz product is regularly calibrated, inspected and maintained during the term of the contract. It includes all repairs 18 and calibration at the recommended intervals as well as any calibration carried out during repairs or option upgrades.
