 $^{^{\}star}$ Other accuracies apply for wall probe length 70 mm combined with a current output (P07):

Operation: 2 channels at 12 mA, without display illumination, relay off, additional measurement error to above values at +25 $^{\circ}\text{C}$ (+77 $^{\circ}\text{F}$), humidity \pm 2.5 $\,\%$ RH

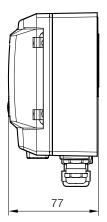

**The determination of measurement uncertainty takes place according to GUM (Guide to the Expression of Uncertainty in Measurement):

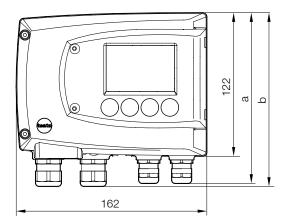

For the determination of measurement uncertainty, the accuracy of the measuring instrument (hysteresis, linearity, reproduceability), the uncertainty contribution of the test site as well as the uncertainty of the adjustment site (works calibration) are taken into account. For this purpose, the value of k=2 of the extension factor, which is usual in measurement technology is used as a basis, which corresponds to a trust level of 95%.

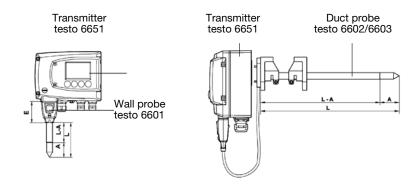

^{***}For continuous applications in high humidity (>80 %RH at \leq 30 °C for >12 h, >60 %RH at >30 °C for >12h), please contact us via www.testo.com.
